Exclusive soy candles with wooden wicks
brand perfume inspired fragrance

- *The candle is made with 100% non-GMO materials, processed from soy beans, free from pesticides, herbicides and toxins.
 - *Soy wax is a natural product that can also be used for body massage.
 - *Not tested on animals.
 - *The candle is non-toxic and safe for your health – it produces 90% less soot than traditional paraffin candles (“no smoke”).
The main factor in soot production is the amount of carbon in the burned material, which is minimal in soy.
Paraffin wax candles are processed from crude oil, which contains 80% of carbon itself.
 - *The candle is hypoallergenic and can be burned in the presence of children and pets.
 - *Ornate Polish glass and USA-patented wooden wicks are used in the production of candles.
 - *Some of our candles come in containers which can be used for other purposes (i.e. as tealight lanterns) after the candles are burned.
 - *Soy wax stains are easy to remove, as opposed to paraffin ones.
They should be treated as soy oil stains, which can be removed with hot water and soap.
 - *Ivory color comes naturally – no artificial dyes are used.
 - *To ensure full melt, the candle should be lit for at least 3 hours each burning.
 - *Droplets of fragrance oils appear on the surface of the candle due to natural reactions of soy wax with the aromatic essences.
 - *Estimated burning time – up to 40h.
-
